Environmental Activities

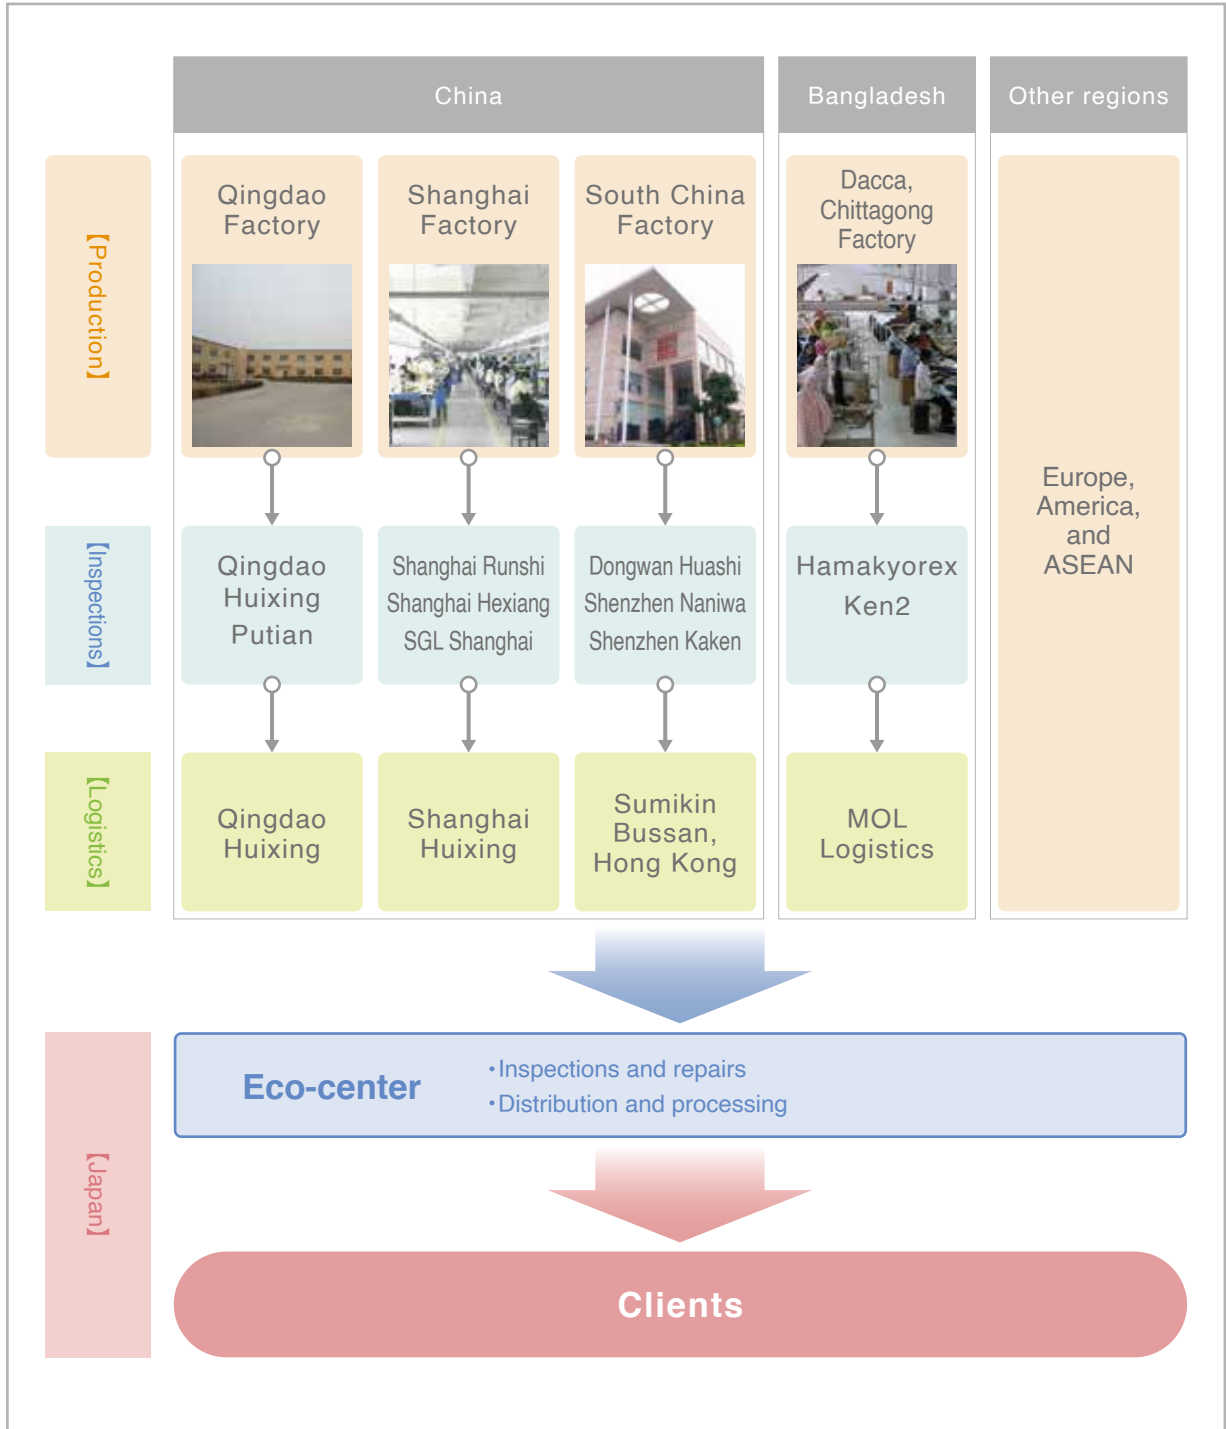

SUMI'SACCS Corporation recognizes global environmental issues as an extremely important matter that could seriously affect future generations and the survival of humankind. We are striving to conserve and improve the global environment and to contribute to society through our corporate activities.

We are guided by five action guidelines: complying with environment related laws and regulations, considering the natural environment, efficiently using resources and energy, establishing, maintaining and continually improving our environmental management system, and publicizing our environmental guidelines.

As part of our environmental management system, we obtained the international environment standard, ISO14001 certification, in 2008 based on an inspection by the Japan Standards Association (JSA). Our entire staff is striving to lower environment loads through the application of this system.

Operation Flow

SUMI'SACCS Corporation has bases with both factory and inspection functions inside and outside of Japan, and provides its services through a comprehensive system in order to satisfy all of its clients.

SINCE 2005.06.02

SUMI'SACCS creates "The Next"

Planning Support Functions

We conduct in-store surveys twice a month to analyze trends while hypothesizing the life styles and typical events in the course of the daily life of each target. Based on the results of these activities, we propose product maps.

Bags (ladies')

Shoes (ladies')

Bags and shoes (men's)

We prepare maps suited to our clients by trend, by taste, and by scene, etc. We can give comprehensive presentations including bags and shoes, plus accessories, scarves, stoles, and other products.

SUMI'SACCS Exhibitions

SUMI'SACCS holds two exhibitions a year in its showroom. We constantly pursue novelty by, for example, reflecting the interest created by blending topical materials or functions or by combining contradictory elements to create a mixed taste feeling in our products. We also use these exhibitions as an opportunity to offer multi-faceted presentations, offering proposals taking advantage of our broad range of production capabilities and production functions which are characteristics of a trading company.
